

FOURSIS COMPANY PROFILE

Foursys is a specialist in security solutions, with over 15 years experience, 800 customers and 2 million licensed users throughout the UK, all protected with the products and services that we supply.

Foursys provides security solutions for the following areas:

Desktop Security

Desktop security means more than just an AV solution. Sophos Endpoint Security and Control means that customers have cross platform security against viruses, spyware, adware, undesirable applications and unauthorised network access.

Encryption

Information is an organisation's most important asset and the protection of that data is vital, especially with increasing use of mobile computing and removable media. There is a full range of Sophos encryption products to protect laptops, desktops, removable media and email traffic. This means that organisations can protect data at the endpoint (data at rest), during transmission (data in motion) and during processing (data in use).

Cost effective upgrades are now available for Sophos Endpoint and Email users to include Security and Data Protection with encryption of devices or email messages or both. In addition the Sophos SafeGuard Enterprise range provides solutions for those needing the highest level of data protection.

Foursys Professional Services Guarantee

If you are not satisfied, or if circumstances outside our control prevent the services work being completed, then a Foursys engineer will return at no extra charge to complete the work required or the cost of the work will be refunded.

Foursys professional services and training courses are provided by certified engineers with practical experience in the products involved.

Compliance and Control

A powerful Sophos NAC Advanced compliance assessment solution ensures organisations can control who and what is connecting to their network. It can also ensure that a computer complies with basic security checks, such as having an up-to-date Anti-Virus and security patches installed.

Email and Web Security

Email and web security solutions are available for internal security, at the gateway (using software or appliances) and as a managed service. Our skill lies in being able to advise customers on the most suitable technical and commercial solution for their needs from vendors such as Sophos, Utimaco, Websense, Clearswift, Microsoft and Webroot.

DLP and Data Security

Data Leakage Prevention is an integral part of an organisation's risk management strategy, as it helps to reduce the risk associated with sensitive information and inappropriate data movement. The Websense Data Security Suite allows an organisation to look at context, content and destination, so that you can manage who can send what information to who and how. Sophos Endpoint 9 has DLP features designed to stop accidental data leakage.

Foursys Services

Foursys can provide these services to our customers:

- Professional Services - Installation/Upgrade
- Security Health Check
- Enhanced Telephone Support Agreement
- System Support Agreements
(choice of Silver, Gold, Platinum)
- Complete Solution Support

Foursys

Our Customers

The Foursys customer base of 800 organisations with 2 million licensed users is spread throughout the UK and Ireland from Shetland to Cornwall and from Southend to Belfast. We support all sizes of customer site from 5 PCs up to 50,000 PCs.

Foursys can provide a reference from a similar type and size of organisation, and new customers are encouraged to ask for a reference site.

Foursys sales and technical teams are focused on market sectors such as Government, NHS, Education, Corporate and Charity.

Our Trusted Vendors

Foursys is a very focused solution provider. We believe in being the best by knowing a great deal about our vendors' products and how they should be used.

We work with a number of best of breed vendors. Companies such as Sophos, Websense, Clearswift, Celestix and Microsoft are all world leading brands and our close working relationship with these vendors means that Foursys can offer a high level of advice, service and value to our customers.

Sophos

The Sophos Security and Control product range is designed for use in a network environment, including Sophos Endpoint, Email, Web and Network Access Control products. Encryption products from the Utimaco SafeGuard range have already been added to Sophos Endpoint and Email to create new Data Protection products for customers. Foursys is the largest Sophos Platinum Partner in Europe with considerable experience in deploying Sophos products and ensuring that they are used most effectively.

In 2009 Foursys was recognised by Sophos as their UK Partner of the Year for the eighth year running with over 800,000 licensed users across more than 700 sites. Standard customer support and updates are included in all licences, with the option to enhance this support if additional services are needed.

Utimaco (now part of the Sophos Group)

The Sophos-Utimaco partnership brings together two industry leaders with a wealth of security experience, combining encryption, endpoint protection, and network access control expertise. Utimaco encryption products have already been combined with Sophos Endpoint to create the new Endpoint Security and Data Protection product. The SafeGuard MailGateway software provides encryption at the mail gateway and will shortly be integrated with Sophos Email software and ES appliances as the new Sophos Email Security and Data Protection product. The SafeGuard Enterprise range has also been bundled with Sophos Endpoint to create a cost effective solution for desktop protection.

Websense

Websense Web Security, Email Security and Data Security (DLP) solutions are available using gateway software, appliances and managed services. So customers can choose the best medium for their particular requirements. Websense is now a global and UK market leader in web, email and data security.

Foursys is one of the UK's top Websense Platinum Partners, with the highest level of Partner accreditation available and over 400,000 licensed users across more than 300 sites. Standard customer support and updates are included in all licences, with the option to enhance this support if additional services are needed.

Celestix

The Celestix web appliance platform from Foursys is the most widely used appliance platform for Microsoft ISA Server. The Celestix appliance range is typically used as a hardened Windows or ISA platform to run Websense Web Security. Foursys, as the largest supplier of Celestix ISA web appliances in the UK, offers resilient and load sharing solutions and enhanced support to all customers. In addition Foursys can offer a single point of contact for support not just on the Celestix hardware but also the Microsoft ISA Server software and Websense security software installed. Foursys was recognised by Celestix as their UK Partner of the Year in 2009 for the second year in succession.

Clearswift

Foursys is one of the UK's top Clearswift Premium Partners, with the highest level of partner accreditation available, and over 350,000 licensed users supported across 200 sites. Foursys Enhanced Telephone Support is available to all customers. Product updates are included in all licences.
