

Foursys

FOURSYS PROFESSIONAL SERVICES SECURITY HEALTH CHECK

Foursys can offer a one-off Security Health Check or Annual Health Check Service covering key Sophos, Websense, MIMESweeper and Microsoft ISA security products.

The Foursys Security Health Check provides a collection of services designed to assist our customers and offer guidance on securing their network. Many of our customers have historically installed a Foursys supplied security solution, but have reported that they would like assistance to ensure that the solution is still achieving best practice security standards.

The Foursys Security Health Check provides a full review of the installed security solutions and provides a documented report on recommended changes and future proofing.

A Foursys Certified Engineer will review the security infrastructure at the customer location. A Security Health Check for one of the products listed (see table) will normally take one day and is charged at the same day rate for all customers in the UK and Ireland and include expenses.

Foursys Professional Services Guarantee

If you are not satisfied, or if circumstances outside our control prevent the services work being completed, then a Foursys engineer will return at no extra charge to complete the work required or the cost of the work will be refunded.

Foursys professional services and training courses are provided by certified engineers with practical experience in the products involved.

The Technical Features of the Foursys Security Health Check include:

- Briefing meeting including overview of security architecture.
- Ensure Security solution is operating correctly and updating.
- Check status of solution and its configuration.
- Review patch level and service pack level and where necessary update to the latest release.
- Perform check of current rules and policies against best practice and organisation requirements.
- Review of firewall or client firewall and policy.
- Review integration with Active Directory or other Directory service.
- Knowledge Transfer on existing security solution and any additional security services required.
- Investigate any special issues requested.
- Provide a report to customer on strengths and weakness of the security policy and recommend any corrective action.

The Business Benefits of a Foursys Security Health Check include:

- General Review - Providing a proactive and unbiased review of the customers security solution.
- Troubleshooting - Investigating, assessing and reporting on problem areas.
- Return On Investment - Ensuring the security is maximised for a customers solution, by reviewing configuration, policy and administration.
- Business Continuity - Reviewing the solution to assess any implications.
- Due Diligence - Ensuring customers are carrying out due diligence on their network security by implementing an external health check.
- Data Integrity - Assists in protecting the integrity of customer data by reviewing configuration, policy and administration.

Investigate customer specific issues	✓	✓	✓	✓	✓

The Foursys Security Health Check can usually be achieved in one working day.

Multiple product health checks can be accommodated.

For complex infrastructure and deployment, Foursys will work with the customer to produce a scope of works prior to the Health Check being undertaken.
