FOURSYS SERVICES SOPHOS NETWORK ACCESS CONTROL

**Foursys can offer presale technical advice,
Professional Services, and Training Courses.**

Why use Sophos NAC?

Because you want to prevent security issues by assessing and controlling all managed and unmanaged computers. Sophos NAC will enable you to:

- Detect and fix managed endpoint vulnerabilities
- Ensure that any guest computers match your security requirements before they access your network
- Prevent any unauthorized computers from accessing the network.

Which Sophos NAC – Endpoint or Advanced?

Choose how much control you want:

- Endpoint NAC gives you fundamental control of the security status of managed and unmanaged computers. It is typically intended for small/medium size networks
- Advanced NAC gives you greater control through more sophisticated policy definitions, and advanced reporting capabilities. It can be used for all sizes of networks and for more complex networks. Endpoint users receive a significant discount when upgrading to Advanced NAC.

Foursys and Sophos

Foursys has been the largest Sophos Partner in Europe since 2004. We have over 700 Sophos customers with over 800,000 licensed users throughout the UK in sectors such as Government, Healthcare, Education and Corporate. Foursys has considerable expertise in deploying Sophos products including NAC Advanced and was the first company in the UK to deploy NAC Advanced in Enforcement Mode, that is a fully operational site.

Foursys Professional Services Guarantee

If you are not satisfied, or if circumstances outside our control prevent the services work being completed, then a Foursys engineer will return at no extra charge to complete the work required or the cost of the work will be refunded.

Foursys professional services and training courses are provided by certified engineers with practical experience in the products involved.

What does Foursys provide?

Presale Technical Advice

If you are not sure of what product to use or how to deploy it, then you can get advice from our sales or technical staff. We will advise you based on your particular requirements, possibly comparing the Sophos Endpoint and Advanced NAC solutions with each other, so that you can decide which is best for you.

Professional Services

Foursys engineers will provide Professional Services to customers for Sophos NAC. Onsite services can be a Health Check where the configuration is not only checked against best practice but issues are investigated and a written report provided with advice on corrective actions. Or you can take advantage of our engineers' experience of installing and upgrading products at many sites throughout the UK. Onsite services are at the same day rate for all customers in mainland UK and include expenses, so we do not penalise our more remote customers. Out of hours and weekend working are available at extra cost. Remote Webex can be quicker and easier to set up than an onsite visit.

Training Courses for Sophos NAC Administrators

Foursys can provide a 2 day Sophos NAC Training Course, or a Fast Track 1 day course, for those who want a thorough grounding in the product. Foursys training courses can be on customer site (and so possibly allow you to train more people at less cost) or at our Cambridge training room. Courses are designed for a maximum of 4 delegates so this means that users receive more individual attention. We focus on what administrators need to know with real life labs on configuration and troubleshooting. Courses can also be tailored to meet the needs of your organisation so that less important areas are covered as an overview only or not included.

Foursys can provide these services directly or in conjunction with your existing Sophos reseller.
