# TRAINING COURSE PRICES AND COURSE SCHEDULE MICROSOFT ISA 2006

This is a hands-on Course, designed specifically for administrators who would like to extend their knowledge to realise the full potential of Microsoft ISA Server software.

## Microsoft ISA 2006 Course Summary

This course is geared to real world deployment scenarios, rather than designed around a Microsoft syllabus. It has an emphasis on the hands-on configuration aspects. The course is delivered by certified and experienced engineers.

The course will cover the architecture of Microsoft ISA, including all the key aspects of running Microsoft ISA on a day to day basis. Attendees will be provided with laptop PCs on which they will complete a series of labs that enable them to get hands on experience with configuring "live" systems with Microsoft ISA.

Attendees will also learn how to troubleshoot and support Microsoft ISA deployment, and how to get the most out of the solution.

## Foursys Training Courses available

- Microsoft ISA Server 2006 Standard/Enterprise Administration 2 day
- Websense Web Security Administration 1 day
- Combined Microsoft ISA Server 2006 and Websense Web Security Administration 3 day
- Sophos Endpoint Administration 2 day
- Sophos NAC Advanced Administration 2 day
- Combined Sophos Endpoint and Websense Web Security Administration 3 day

## Foursys Professional Services Guarantee

If you are not satisfied, or if circumstances outside our control prevent the services work being completed, then a Foursys engineer will return at no extra charge to complete the work required or the cost of the work will be refunded.

Foursys professional services and training courses are provided by certified engineers with practical experience in the products involved.

All course content is provided in paper and electronic format. A certificate is provided on completion of the course. See over for detailed course schedule.

## Foursys Training Courses

Foursys training courses all have these key advantages to customers:

- **At Foursys or on-site**  
Choosing to hold courses on-site can mean that more people can attend and you do not incur the cost of travelling. Alternatively, you can come to our dedicated training room at our offices near Cambridge.
- **Small Class Numbers**  
A maximum of 4 delegates ensures that everyone has plenty of one-to-one instruction and gets the very most out of the course
- **Relevant content**  
We focus only on what administrators need to know, covering the installation and the actual platform that they need to use. Real life labs on setup and troubleshooting are included. This makes the course both concise and relevant.
- **Courses Can be Tailored**  
This ensures that the course meets the needs of your organisation, and areas that are not important can be covered as an overview only or deleted.
- **Cost Effective**  
Training from 1 to up to 4 people on site – or at our offices, means that you can maximise the value that you get from your training budget.
